Proc. SPIE 2010*

## What Patients Say About BioFlex

“I no longer need pain medication and I can walk over one km as compared to 300 feet prior to treatment...You will never know how much you have changed my life.”

-G. Hatch

“Dr. Kahn indicated that i was suffering from arthritis of the back, shoulders and knees. Following BioFlex Laser Therapy all of my symptoms have cleared up. I no longer require medications. Moreover, I now feel better than I did in my 40's and 50's.”

-A Balding

BioFlex Laser Therapy has achieved dramatic success rates in relieving the pain of arthritis.

## A Drug-Free Solution To Arthritis Pain

## How Does Arthritis Affect You?

- 4.5 million, or 1 in 6 Canadians aged 15 years and older report having some form of arthritis.
- Two thirds of those affected with arthritis are women.
- Arthritis costs the Canadian economy more than \$33 billion annually.
- Among all causes of disability in Canada, arthritis ranks first among women and second among men.

## How Can BioFlex Laser Therapy Help?

BioFlex Laser Therapy is a safe, effective and painless therapy that relieves pain, increases joint mobility, reduces inflammation around the joints, and regenerates new cartilage.

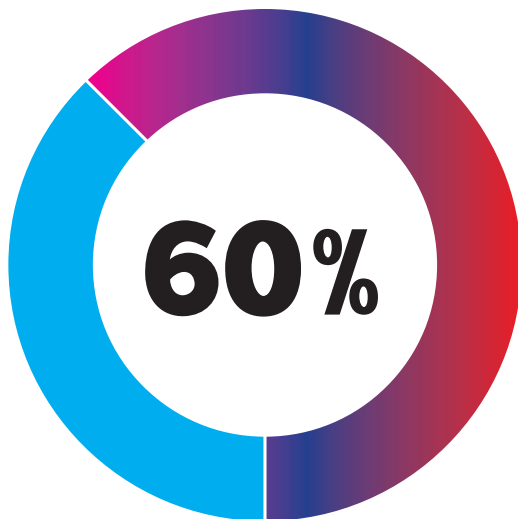

In over 3,000 scientific studies, there have been no reported side effects of using Laser Therapy, making it a non-invasive and non-toxic alternative to commonly used arthritic medications.

The BioFlex Laser Therapy Solution has helped Canadians, from everyday people to elite athletes, conquer pain and get back to the activities they enjoy most.

## Conventional Approaches

The pain of arthritis holds millions of Canadians back from performing routine daily activities such as walking, enjoying a round of golf, gardening, or even playing with their grandchildren.

Conventional therapies focus on pharmaceuticals which serve to mask symptoms and often have adverse effects. Problems with arthritic medications such as Vioxx, documented in The New England Journal Of Medicine, have led many sufferers to seek safer alternatives.
